Plant Description

Article Type	Organic Seed DE-ÖKO-006
Life Cycle	Perennial
Family	Malvaceae
Origin	Western North America
Special Features	Bright pink, papaver-like blossoms. Drought tolerant. Moderate self-seeds in optimum growing conditions.
Historical	Traditional use against warts.
Basic Colour	(pink / salmon)
Flower Colour	bright pink
Natural Flowering Period	July - September
Winter Hardiness Zones	Z4 - Z9
Foliage	strongly pinnatifid
Growth Habit	stoloniferous / hanging
Height with Flowers	20 cm
Soil Requirements	dry / well-drained / average / warm
Location	 
Characteristics	medicinal plant / groundcover
Usage	honey-bee food plant / for the rock garden

Cultivation

Grams per 1000 seeds	5 Gram
Seeds per Gram	200 (does not correspond to the number of plants!)
Gram to get 1000 plants	20 Gram (if sown directly into pots etc. you will need a larger quantity)

Sowing Direction

(14) A warm period of +25 to +30°C [77 to 86°F] and moist conditions after sowing for about 4–5 weeks neutralizes the germination inhibition. The phytohormones which inhibit germination will then break down. At this point the sowing needs very cool conditions, approximately +2°C [36°F]. Initial germination lasts for about 80 days under these conditions. During this period keep in dark cold storage chamber. Then temperature and lighting must be increased gradually.

Growing On

Container Size(s)

1 plug per 8/9 cm (3 1/2")
