Plant Description

Article Type	Übersetzung fehlt: pillierte Saat
Life Cycle	Perennial
Family	Campanulaceae
Special Features	Dense flower stalks, rich and early flowering, vigorous and bushy growth, first year flowering, perfect for pot culture.
Basic Colour	(violet)
Flower Colour	brilliant violet blue
Natural Flowering Period	May - October
Flowering	First year flowering
Winter Hardiness Zones	Z6 - Z10
Height with Flowers	55 cm
Soil Requirements	moist / average
Location	
Usage	honey-bee food plant / suitable for cutting / flowering pot plant

Cultivation

Grams per 1000 seeds	1.17647 Gram
Seeds per Gram	850 (does not correspond to the number of plants!)
Gram to get 1000 plants	1 Gram (if sown directly into pots etc. you will need a larger quantity)

Sowing Direction

(4) These are very tiny seeds which should be mixed with finest sand or talcum for an even sowing. Do not cover with compost, only press them in gently. Irrigate from the bottom or with a hand-sprayer, so that the seeds will not be washed away.

(20) To obtain best germination results, seeds need temperatures of +22°C [72°F] or more. Moderate, but constant humidity is very important. Gunnera, however, prefers very moist (not wet) and warm (+24 to +30°C) [75 to 86°F] conditions.
