Plant Description

Life Cycle	Perennial
Family	Papilionaceae
Distinction	Award of Garden Merit (A.G.M.) from the Royal Horticultural Society.
Basic Colour	(red / scarlet / purple)
Flower Colour	deep pink
Natural Flowering Period	June - August
Winter Hardiness Zones	Z5 - Z9
Growth Habit	climbing
Height with Flowers	100 cm
Soil Requirements	average
Location	 
Usage	suitable for cutting

Cultivation

Grams per 1000 seeds	35.71429 Gram
Seeds per Gram	28 (does not correspond to the number of plants!)
Gram to get 1000 plants	80 Gram (if sown directly into pots etc. you will need a larger quantity)

Sowing Direction

(8) These perennial seeds germinate very irregularly over a long period. Lower temperatures of less than +5°C [41°F] are very effective. Seed trays should not be discarded prematurely. Constant moisture must be maintained. Do not leave in direct sunlight. For Alstroemeria we recommend to keep sowing for 3 weeks at approximately +30°C [86°F], then 3 weeks at +5°C [41°F], then at +21°C [70°F].

(10) For these bigger hard-shelled seeds, mechanical damaging of the shell is helpful for quicker swelling. One method is to grind the seed in dry sharp sand. They can also be treated for several hours in a “softener” (Polyethylenglycol 6000), which is used for the production of plastic material.
