Plant Description

Life Cycle	Perennial
Family	Zingiberaceae
Origin	Eastern Himalaya
Special Features	TCM plant.
Basic Colour	(white / cream)
Flower Colour	yellowish-white
Natural Flowering Period	June - July
Winter Hardiness Zones	Z9 - Z10
Foliage	dense clumbroad lanceolate
Height with Flowers	150 cm
Soil Requirements	average
Location	
Characteristics	medicinal plant / culinary herb

Cultivation

Grams per 1000 seeds	14.28571 Gram
Seeds per Gram	70 (does not correspond to the number of plants!)
Gram to get 1000 plants	50 Gram (if sown directly into pots etc. you will need a larger quantity)

Sowing Direction

(14) A warm period of +25 to +30°C [77 to 86°F] and moist conditions after sowing for about 4–5 weeks neutralizes the germination inhibition. The phytohormones which inhibit germination will then break down. At this point the sowing needs very cool conditions, approximately +2°C [36°F]. Initial germination lasts for about 80 days under these conditions. During this period keep in dark cold storage chamber. Then temperature and lighting must be increased gradually.
