Plant Description

| | |
|---------------------------------|---|
| Life Cycle | Perennial |
| Family | Aristolochiaceae |
| Origin | Western North America |
| Special Features | Good groundcover species of mostly evergreen foliage with large heart-shaped leaves, little reddish-brown jug-shaped blooms underneath the leaves. Roots and leaves have a spicy fragrance like ginger. |
| Basic Colour | (brown) |
| Flower Colour | reddish brown |
| Natural Flowering Period | May - June |
| Winter Hardiness Zones | Z6 - Z9 |
| Foliage | large, round, heart-shaped, mostly evergreen |
| Growth Habit | stoloniferous / evergreen / wintergreen |
| Height with Flowers | 20 cm |
| Spacing between Plants | 30 cm |
| Soil Requirements | acidic / average / humus rich, fertile |
| Location |  |
| Characteristics | ornamental foliage plant / medicinal plant / groundcover |

Cultivation

| | |
|--------------------------------|---|
| Grams per 1000 seeds | 3.57143 Gram |
| Seeds per Gram | 280 (does not correspond to the number of plants!) |
| Gram to get 1000 plants | 12 Gram (if sown directly into pots etc. you will need a larger quantity) |

Sowing Direction

(19) To stop the germination inhibition give seeds a warm compost (about +22 °C) [about 72 °F] with constant humidity for at least 6 weeks. Then keep cold (-4 to +4 °C) [25 to 39 °F] for 6–8 weeks. Usually, the germination starts at +4 °C [39 °F]. Raise temperatures gradually up to +10 °C [50 °F] until germination is completed. If the warm or cold period was not long enough the seeds will not germinate until the following year. They will then need another warm period (summer) and a cold period (winter). Well-known examples: Cimicifuga and Helleborus.

Growing On

Container Size(s)

1-2 plugs per 11/12 cm (4 1/2") / 2-3 plugs per 15 cm (6")

Fertilizer

Medium (150-200 ppm)
