Plant Description

Life Cycle	Perennial
Family	Ranunculaceae
Distinction	Selected as Perennial Plant of the year from the PPA (Perennial Plant Association).
Basic Colour	(mixture)
Flower Colour	red, pink, white
Natural Flowering Period	February - April
Winter Hardiness Zones	Z3 - Z8
Height with Flowers	35 cm
Soil Requirements	average
Location	
Characteristics	toxic plant / groundcover
Usage	suitable for cutting

Cultivation

Grams per 1000 seeds	12.5 Gram
Seeds per Gram	80 (does not correspond to the number of plants!)
Gram to get 1000 plants	50 Gram (if sown directly into pots etc. you will need a larger quantity)

Sowing Direction

(19) To stop the germination inhibition give seeds a warm compost (about +22 °C) [about 72 °F] with constant humidity for at least 6 weeks. Then keep cold (–4 to +4 °C) [25 to 39 °F] for 6–8 weeks. Usually, the germination starts at +4 °C [39 °F]. Raise temperatures gradually up to +10 °C [50 °F] until germination is completed. If the warm or cold period was not long enough the seeds will not germinate until the following year. They will then need another warm period (summer) and a cold period (winter). Well-known examples: Cimicifuga and Helleborus.

Scheduling**Sowing Time Hint**

For best results sow after harvest, approx. July.
