Plant Description

Life Cycle	Perennial
Family	Iridaceae
Origin	Cultivar
Special Features	Remarkable dwarf strain with multi-branched flower stems and a dazzling array of uni-colored and striped flowers. Drought tolerant/ for xeriscaping/ water-wise design. Remarkable perennial for modern garden design.
Historical	Introduced by JELITTO PERENNIAL SEEDS in 1998. Pardancanda norrisii is the product of a cross between BELAMCANDA chinensis and PARDANTHOPSIS dichotoma. Years of development work by Harlan Hamernik at Bluebird Nursery, Clarkson, Nebraska resulted in this compact, dwarf seed strain.
Basic Colour	(mixture)
Flower Colour	yellow to orange, red to pink, and lavender to purple
Natural Flowering Period	June - September
Winter Hardiness Zones	Z5 - Z9
Foliage	sword-like leaves rising from a stoloniferous root stock
Growth Habit	erect / compact / vigorous
Height with Flowers	35 cm
Spacing between Plants	40 cm
Soil Requirements	well-drained / average
Location	
Characteristics	decorative fruit
Usage	for the rock garden / suitable for cutting

Cultivation

Grams per 1000 seeds	25 Gram
Seeds per Gram	40 (does not correspond to the number of plants!)
Gram to get 1000 plants	50 Gram (if sown directly into pots etc. you will need a larger quantity)
Sowing Rates/Trays	2 - 3 per cell
Plug tray recommended size(s)	open flats / 72
Sowing Direction	(7) These seeds must be covered with a layer seed kernel diameter. Keep daytime temperatures at approximately +20°C [68°F], and keep the moisture constant, for Cyclamen, however, +18°C [64°F] is recommended. The seeds must be kept in the light and moderately warm after germination.

Scheduling

Best Sowing Date	Anytime (northern Hemisphere, Field condition)
Sowing to Germination	4 - 8 weeks
Germination to Transplant	4 - 6 weeks
Transplanting to Potting	6 - 8 weeks
Cutting back at Transplanting	Not Necessary.

Growing On

Container Size(s)	1-2 plugs per 11/12 cm (4 1/2") / 2-3 plugs per 15 cm (6")
Vernalization	There is no current research on vernalization but a prudent recommendation for any perennial would be 6-12 weeks (a few might need 15 weeks!) at an average daily temperature of 40°F (5°C). Exposure to cold may not be necessary for flowering but might improve quality.
Forcing	An obvious place to experiment - following vernalization - would be raising daytime temperatures to 60° - 65°F (15° - 17°C). Provide 16 hours of continuous lighting. During the short days of winter, provide a night interruption lighting of 4 hours between 10:00 p.m. and 2:00 a.m.
Fertilizer	Medium (150-200 ppm)
